

MODULE CABLE CLIP

- + Secure and organised cable management
- + Prevents cable movement and potential damage
- + Quick snap-fit installation onto module frames

KEEP CABLES SECURE AND PROTECTED

The Schletter Module Cable Clip is designed to provide secure and organised cable management for photovoltaic installations. By firmly fastening DC cables beneath the solar module, the clip helps prevent cable movement, sagging, and potential damage caused by wind, vibration, or contact with the roof surface. Its simple snap-fit design allows for fast installation while maintaining a clean and professional appearance throughout the system. Manufactured from durable, corrosion-resistant spring steel, the Module Cable Clip is engineered to withstand harsh Australian conditions, delivering reliable long-term performance and helping to protect critical electrical connections over the life of the installation.
