

PROLINE END CAPS

- + Provides a clean and professional rail finish
- + Protects rail interiors from dirt and moisture
- + Available in Black and Silver colour options

DESIGNED FOR LONG TERM RAIL PROTECTION

The Schletter ProLine End Cap is designed to provide a secure and professional finish to open ProLine rail ends. Manufactured from high-quality polyamide (PA), the end cap helps protect the internal rail cavity from dirt, moisture, insects, and other environmental contaminants that may impact long-term system performance. Engineered specifically for Schletter ProLine module support profiles, it delivers a precise fit and simple installation while enhancing the overall appearance of the mounting system. Available in both black and grey colour options to suit different rail and system aesthetics, the durable, UV-resistant construction ensures reliable long-term performance in harsh Australian conditions. An essential finishing component, the ProLine End Cap helps improve both the appearance and longevity of any ProLine solar mounting installation.
