

RAIL CABLE CLIP

- + Securely manages up to four DC cables
- + Prevents cable movement and abrasion
- + Quick snap-fit installation with no additional tools

KEEP CABLES SECURE AND PROTECTED

The Rail Cable Clip is designed to provide secure and organised cable management for photovoltaic installations, ensuring neat and unobstructed cable routing beneath solar modules. Capable of holding up to four DC cables, the clip helps prevent cable movement, abrasion, and unnecessary strain that can occur due to wind or vibration, improving both system reliability and safety. Its simple snap-fit design enables fast installation without the need for additional tools, helping reduce installation time while maintaining a clean and professional finish. Manufactured from durable, corrosion-resistant spring steel, the Module Cable Clip is built to deliver reliable long-term performance in demanding environments.
