

PROLINE RAILS

PRO35 | PRO50 | FIXZ PRO

- + Residential and large-scale commercial applications
- + Configuration using Schletter's fasteners and accessories
- + Compatible with all ProLine roof hooks, connectors and clamps

THE RIGHT COMPONENT FOR ANY APPLICATION

Schletter's Pro35 and Pro50 rails are engineered for durability and efficient installation across a range of solar applications.

The Pro35 rail provides a cost-effective solution with medium load capacity, making it ideal for standard residential and commercial projects. The Pro50 rail is designed for commercial roofs with wider purlin spacing, delivering increased strength and stability for larger-scale installations.

For tilt systems, the FixZ Pro rail is optimised for flat roofs, enabling improved panel orientation and maximised energy yield.

Each rail in the Schletter Pro series is purpose-built to meet specific performance requirements, delivering reliable outcomes and long-term value.
